## EXPERIENCE

### General

### Assembly

New York, NY

Sept. 2016 - Dec. 2016

### WEB DEVELOPMENT IMMERSIVE (WDI)

I learned how to learn, and taught myself the basics of Vue.js. I created 4 original web applications with varying difficulties, from a simple text-based puzzle game to a fully functioning, reddit-inspired, classroom forum.

#### Doors

- All programmers like typing... so I created a text based puzzle game inspired by old text-based adventure games like Zork!
- Tech: Javascript, CSS, HTML

#### Tsundoku

- After learning this about this word from a friend of mine, I made this web app with full CRUD capabilities, targeted for people like me who mindlessly buy books but never reads them...
- Tech: Google Books API, MongoDB, Node, Express

#### reAsk

- Sometimes students get left behind in a lesson because they're stuck on something simple. Yet, they don't ask a question from the fear of looking dumb. This web app, targeted for classroom use, lets students ask questions anonymously for the teacher to review.
- Tech: React, Socket.io, PSQL

### Crossmark

New York, NY

Mar. 2016 - Sept. 2016

### SALES REPRESENTATIVE

- Maintained outstanding company to retail store manager relationships.
- Replenished items from the stock room on to the sales floor in a quick and orderly pace.
